

## Opciones habilitadas de MFA

### Multi-factor Authentication

Multi-factor Authentication works by requiring additional factors during the login process to prevent unauthorized access.

#### 1 Factors

Utilize push, SMS, email, one-time password, or a combination of different methods and easily enable them across all users and applications.

|                                                                                     |                                                                                                                                  |            |                                     |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|
|    | <b>WebAuthn with FIDO Security Keys</b> ENTERPRISE MFA<br>Use WebAuthn-compliant security keys                                   | • Disabled | >                                   |
|    | <b>WebAuthn with FIDO Device Biometrics</b> ENTERPRISE MFA<br>Use WebAuthn-compliant device biometrics                           | • Disabled | >                                   |
|    | <b>One-time Password</b> PRO MFA<br>Provide a one-time password using Google Authenticator or similar.                           | • Enabled  | <input checked="" type="checkbox"/> |
|  | <b>Push Notification using Auth0 Guardian</b> ENTERPRISE MFA<br>Provide a push notification using the Auth0 Guardian app or SDK. | • Disabled | >                                   |
|  | <b>Phone Message</b> ENTERPRISE MFA<br>Users will receive a text message or voice call containing a verification code.           | • Disabled | >                                   |
|  | <b>Email</b> ENTERPRISE MFA<br>Users will receive an email message containing a verification code.                               | • Enabled  | <input checked="" type="checkbox"/> |
|  | <b>Recovery Code</b> PRO MFA<br>Provide a unique code that allows users to regain access to their account.                       | • Disabled | <input type="checkbox"/>            |
|  | <b>DUO Security</b> PRO MFA<br>Use your DUO account for Multi-factor Authentication.                                             | • Disabled | >                                   |

## Políticas ajustadas

### 2 Define policies

Policies determine when a user will be prompted to complete additional steps to prove they own a particular account. Use policies to define your level of acceptable risk. You can achieve more refined multi-factor configurations (ex. per application, per user, etc.) by using Actions. [Learn More](#)

#### Require Multi-factor Auth

Define when users will be able to authenticate using an additional factor for all Applications

##### Never

Users are not required to use an additional factor to login.

##### Use Adaptive MFA

Users are required to have an additional factor if the login appears to be a high risk.

##### Always

Users are always required to use an additional factor to log in.

If there are Actions affecting Multi-factor Authentication, they will take precedence over this setting. [Go to Actions](#).

#### MFA Risk Assessors

##### Enable Adaptive MFA Risk Assessment

Risk will be assessed and recorded for all login transactions in your tenant logs. Adaptive MFA Risk Assessment is required for enabling the Adaptive MFA policy, but can also be used to implement custom MFA policies using [Actions](#).

Adaptive MFA requires specific Database Connection settings before it is compatible with phone as an identifier.

[Learn more about the limitations](#)

- Email as an Identifier is on
- Allow Signup with Email is required
- Verify Email on Sign Up is on
- Require Email on User Profile is on

Save

Cancel

#### Additional Settings

##### Show Multi-factor Authentication options

If active, users will be prompted to choose a factor to enroll in. If inactive, user will be automatically prompted for a factor based on what is enabled and most secure.

## Expiración de la sesión

### Session Expiration

#### Default Session Policy

☐

##### Persistent

Keep users logged in after they close and reopen their browser.

☒

##### Non-persistent

Require users to log in again after they close and reopen their browser.

The default policy applies unless an action specifically overrides it.

[Learn more about non-persistent sessions](#)

#### Idle Session Lifetime (Persistent) \*

minutes

Ends persistent sessions after this period of inactivity.

[Learn more about session lifetime settings](#)

#### Idle Session Lifetime (Non-persistent) \*

minutes

Ends non-persistent sessions after this period of inactivity.

[Learn more about session lifetime settings](#)

#### Maximum Session Lifetime (Persistent) \*

minutes

Ends persistent sessions after this time, even if the user is active.

[Learn more about session lifetime settings](#)

#### Maximum Session Lifetime (Non-persistent) \*

minutes

Ends non-persistent sessions after this time, even if the user is active.

## Expiración del token de acceso

### General Settings

#### Id

6a59980d855e4d45d4bfa3ee

The API id on our system. Useful if you prefer to work directly with Auth0's Management API instead.

#### Name \*

IAM Zero Trust API

A friendly name for the API. The following characters are not allowed < >

#### Identifier

https://api.iam-zero-trust

Unique identifier for the API. This value will be used as the `audience` parameter on authorization calls.

### Access Token Expiration

#### Maximum Access Token Lifetime \*

3600

seconds

Time until an `access token` issued for this API will expire.

#### Implicit / Hybrid Flow Access Token Lifetime \*

1800

seconds

Time until an `access token` issued for this API, using either the implicit or hybrid flow, will expire. Cannot exceed the maximum access token lifetime.
